The only spin we put on our pumps is Electromagnetic!

We've seen pump ads that bend the truth, mislead, or flat out lie to get sales. We are starting to wonder if they have secret political ambitions. At Sequence, we prefer to take the straight line and advertise legitimate figures for flow, pressure and power consumption. What *we* say is what *you* get. No absurd definition of "is" and no butterfly ballots.

You should expect no less from a quality pump manufacturer. Each pump is built by hand at our Colorado Springs headquarters. Every single pump assembled gets tested for flow, pressure, quietness and seal performance. Being genuine isn't easy. However it's the way we do business.

Sequence. Just Genuine
